

Forsaken Scrim Bot

Required in your server

- Text channels: `ranked-scrims`, `casual-scrims`
- Roles: `Ranked Scrim`, `Casual Scrim`, `Ladder Moderator`
- Names must match exactly (case-sensitive) — they're set in `config.py`.

Commands

- `/queue` — pick Ranked/Casual, Killer/Survivor, and a scrim set. Posts a matchmaking embed in the right channel and pings the matching role. Buttons let others fill the remaining slots or leave.
- Once 1 killer + 4 survivors have joined: the embed locks, a thread (`match-0000`) opens with the recap, and a voice channel (`Match 0000`) is created for just those 5.
- `!s w <kills>` / `!s l <kills>` — survivors report the result inside the match thread.
- `!k w <kills>` / `!k l <kills>` — killer reports the result inside the match thread.
 - Killer kills 0-5 → survivors win. Kills 6-12 → killer wins.
 - All 5 players must submit the same kill count before the match finalizes.
- `/cancel` (inside a match thread) — vote to cancel. Needs 3 of 4 survivors plus the killer's confirmation.
- `/elo [user]` — view your (or someone else's) killer/survivor elo, rank, and W/L.
- `/leaderboard` — top 10 ranked players, with Killer/Survivor toggle buttons.
- `/forcewin <match_id> <kills>` — **Ladder Moderator only**. Resolves a match directly.
- `/elo <user> <killer_elo> <survivor_elo>` — **Ladder Moderator only**. Overrides a player's elo directly (same command as above, extra params require the role).

Elo rules (config.py)

Everyone starts at 100 elo per side (killer elo and survivor elo are tracked separately).

Outcome	Killer kills	Elo change
Survivor win	0-3	Survivors +13, Killer -13
Survivor win	4-5	Survivors +15, Killer -15
Killer win	6-9	Killer +16, Survivors -16
Killer win	10-12	Killer +19, Survivors -19

Losing-side values weren't specified in the original spec, so they mirror the winner's tier — change `SURVIVOR_LOSS_* / KILLER_LOSS_*` in `config.py` if you want different numbers.

Ranks: Bronze 0-199, Silver 200-299, Gold 300-399, Platinum 400-499, Diamond 500-599, Champion 600+.

Files

- `bot.py` — entry point, intents, cog loading
- `config.py` — every name/number you're likely to want to tweak
- `database.py` — Postgres (asyncpg) data layer
- `embeds.py` / `views.py` — embed rendering and buttons
- `elo_utils.py` / `match_logic.py` — elo math and match-resolution logic
- `queue_cog.py`, `scoring_cog.py`, `elo_cog.py`, `leaderboard_cog.py`, `moderation_cog.py` — one file per command group

Everything sits flat in one folder on purpose — no subfolders to worry about when uploading from a phone.
